COPPER SPRAY

70-57

PRODUCT TYPE

It's combination with acrylic resin provides a good protection against weather laments and a good adherence. The product is 56% of copper on a dry sheet.

UTILISATION

Treated areas should be free of oil, grease and dirt.
Parts already painted or varnished in good condition can be sprayed.
The spray can be applied on all clean metallic surfaces.
Shake well before use.

AVANTAGES AND PROPERTIES

- The sprayed copper surface dries quickly and uniformly under normal dry atmospheric conditions.
- Protects the surface by a thin copper film from adverse damp or aggressive corrosive atmospheres.
- Protection against electromagnetic effects.
- **Copper Spray** is unique. It will cover unwanted discolorations from brazing. This is particularly useful in plumbing installations etc.
- Decorative finishes are enhanced by using **Copper Spray**.
- The electronic industry finds that the product is a high frequency protection.
- It's not a paint but a metallic suspension spray.
- Heat resistant from -100°C to 400°C.

RECOMMENDATIONS

Flammable.
Follow label instructions.
