

**AMETA**  
SOLUTION

## METAPLAST

70-60

*"International confirmation of high quality"*

### PRODUCT TYPE

Recommended for repairs on metal, wood, glass and plastics. **Metaplast** doesn't run, even on vertical surfaces and allows the application of layers of up to 20mm in a single operation.

### AVANTAGES AND PROPERTIES

- Resist's vibrations. The use of highly elastic synthetic resins allows torsions and deformations without ruptures.
- Universal repair product with a 1000 uses.**
- Hardens without pores and watertight without shrinking or fissuring.  
No evaporation of solvents. The hardening process is done through polymerisation.  
At 20°C after 20 to 25 minutes the product can be sanded, drilled and sawed.
  - Unaffected by pressure or shocks. The powerful bond between the aluminium particles and the synthetic resins prevents shattering and crumbling.
  - Doesn't contain volatile solvents. Doesn't harden in the container during a 1 year period if stored in a cool area.
  - Unaffected by cold, even at -5°C and still remains perfectly workable.
  - Risk free for the environment. The dust produced by sanding doesn't stay suspended in the air but immediately settles down on the ground.
  - Incomparable spreading. The use of high quality resins leaves a smooth surface.
  - Good for filling and finishing at the same time.
  - Unaffected by water, oil, gas and diluted acids. **Metaplast** can be used in a universal fashion for repairs on body work, reservoirs, etc ...
  - Temperature resistance is from approx. -20°C to 80°C.

### UTILISATION

Removes corrosion and grease from areas to be repaired. Lightly sand the surface.  
Mix a 100g of **Metaplast** with 2-3g of hardener. Must be used within 5 minutes.  
After 10-15 minutes, the product can be filled and after 20-25 minutes, it can be sanded with a smooth sand paper. The hardening time will be shorter with heat and longer with the cold.

### PACKAGING

<u>Description</u>	<u>Format</u>	<u>Product no.</u>
Paste	1 kg	70-6010
Paste	2 kg	70-6020
