THERMEX

Ceramic based heat insulating paste for applications up to 4000°C.

70-70

PRODUCT TYPE

An insulating paste that prevents heat damages when welding and soldering.

AVANTAGES AND PROPERTIES

- Prevents unnecessary paint burn off.
- Leaves no residues and can be removed with a spatula.
- Can be brushed out on any textile once dried.
- Prevents shrinkage, distortion and stress build up.
- Economical in use, since the paste can be used over and over again, right up to the top crust.
- **Thermex** is composed only with pure natural products.
- Absolutely non-toxic does not cause allergies.
- Isn't flammable or explosive.

UTILISATION

Autogenous welding and brazing: Cover the work piece with a 10mm sheet of **Thermex** as far as the welding flame reaches.

Arc and gas welding: The stronger the material, the more **Thermex** is to be applied on both side of the welding seam. If necessary, cover a second strip on 10-20mm next to the first one.

After cooling off the welding seam, peel the upper sheet and then the left over can be used as often as you want.

The secret of **Thermex** are the thin balls of special ceramic powders. During welding and soldering the humidity of **Thermex** condensates into balls.
